PEST CONTROL

Flying insects are known to carry millions of disease causing organisms and have been implicated as carriers of *Listeria*, *Salmonella* and *E.coli*!

Why control flies?

By law (1990 Food Safety Act and associated regulations), food that is sold must be wholesome and free from contamination and you are required to demonstrate 'due diligence' that you have taken every precaution against contamination from flying insect pests. These pests are highly mobile and make no distinction between food prepared for our consumption and any other surface that they land on, walk over, defecate on or eat. Many insect species have particularly unsavoury habits and therefore represent a high contamination risk to our food. With this in mind, fly control becomes more than just hanging any unit where it can be seen. Its effectiveness, according to type and siting, has a real bearing on how much protection you and your customers receive.

How to choose the right fly killer

	Titan 300	Sunburst / Naturale	Cham Sirius	Cham 1x2	Cham 1x2 Discretion	Cham Qualis white/SS
Front of House		✓	✓		✓

Sticky Board Fly Trap		✓	✓	✓	✓	✓
Electronic Fly Killer	✓					

N.B.: the stainless steel versions of the Titan 300, Chameleon 1x2, & 2x2 are suitable for areas with moderate levels of humidity and corrosive substances.

FRONT OF HOUSE
Front of house installations are typically in restaurants, bars, cafés and hotel lobbies. For front of house areas the requirements are usually for aesthetically pleasing designs that blend with the décor and are silent in operation. For these installations sticky board traps designed as wall sconces or uplighters are an ideal choice.

COMMERCIAL
Commercial installations are usually small, medium and large retailers and kitchens. They are often places where food is being prepared or where open food is displayed.
For hygiene and aesthetic reasons stainless steel construction is often specified. These demanding areas usually require large and powerful fly killers. Many installations are in public view so the design may still require aesthetically pleasing machines. Often a mixture of units that look like commercial equipment and units with discretion covers fitted are used.

INDUSTRIAL
Industrial installations are usually factories and warehouses with large areas that need to be protected. Industrial fly killers are typically quite large and powerful industrial-looking units. These units can offer protection for areas up to 500m² with just one unit.

For a Beaver Pest Control solution to all your flying insect control needs, refer to the model selection guide adjacent.

Chameleon®
QUALIS

The unique Chameleon Qualis fly control system incorporates the latest UV LED tube technology Quantum X, to deliver a whole new level of fly control.

Quantum® X filament LED

OTHER LED TUBES
RESTRICTED HARSH 120° BEAM

- No mercury
- Environmentally sustainable
- FEP shatterproof coated
- Future-proof

QUANTUM®
LED
X

Why is the Quantum® X different?

- Unrivalled distribution of UVA LED light significantly improving flying insect control.
- Minimal energy consumption without any dimming – typically over 35% less than other LED technologies.
- Lower environmental impact: zero mercury content & 3-year tube lifespan.

A unique design, lightyears ahead of the rest

- No dazzling UV spots as with traditional LED chip technology used by other manufacturers. These can be uncomfortable for people and too intense for attracting flies.
- Unique Helium LED cooling gas for maximum reliability and longer lasting performance.
- Shatterproof coating containing all elements in the event of a breakage.

ENERGY SAVINGS

Comparison of power consumption in Watts

	Chameleon® Qualis	Benchmark LED fly trap	2x15W Fluorescent Fly Trap
Consumption	13 Watt	20 Watt	40 Watt
Cost per year	£32	£49	£98
	*Using Qualis Annual Savings	£17 per unit £170 per site	£66 per unit £660 per site

Calculated with an average cost of electricity of 28p per kWh and 10 units per site.
